

ENDLESS SOLAR WATER HEATERS THE BEST WATER HEATERS UNDER THE SUN!

Victorian Rebates

A Victorian Government rebate is available if an Endless Solar Water Heater is installed in an **existing home**. Rebates are generally restricted to gas boosted solar water heaters.

Rebates are paid by the Victorian Government for the following models:

- 10 Evacuated Tubes
- 22 Evacuated Tubes
- 30 Evacuated Tubes

Renewable Energy Certificates

Renewable Energy Certificates (RECS) can be created from solar water heaters in new homes and for replacement of electric water heaters in existing homes.

RECS are available after a solar water heater is installed. Endless Solar is willing to purchase the RECS from home owners at an agreed price, effectively providing a rebate on the cost of installing a solar hot water system.

EPA (USA) on Solar Water Heaters

The EPA of the USA on evacuated tube collectors:

“ These collectors are more efficient than flat plates for a couple of reasons. First, they perform well in both direct and diffuse solar radiation. This characteristic, combined with the fact that the vacuum minimizes heat losses to the outdoors, makes these collectors particularly useful in areas with cold, cloudy winters. Second, because of the circular shape of the evacuated tube, sunlight is perpendicular to the absorber for most of the day.”

Quality Products Backed by Generous Warranties

Endless Solar uses only the best components available to form part of their systems and back this with generous warranties including:

- ★ Evacuated tube collectors, frame and manifold (10 years)
- ★ Marine quality stainless steel water storage tanks (10 years)
- ★ Four way valve (10 years)
- ★ Instant gas booster (10 years on heat exchanger up to 3 years parts and labour)

New Standards for New Homes

From 1 July 2005 all new houses built in Victoria are required to install a Solar Water Heater or plumbed rain water tank. In addition all new houses built in Victoria must achieve a 5 star energy rating.

New home buyers are free to choose between a rain water tank and a solar water heater.
